

SITEMASTER 200® Software Versions, Part Numbers, Updates, and Upgrades

Software Versions – We have released four Main Versions over the years numbered 1.0, 2.0, 3.0, and 4.0. Version 4.0 is our current Main Version. Within the Main Versions are Updates that we release at no charge. We number these version updates with a release number such as v3.15, for example.

Schlage Part Numbers – The Software is offered in two versions as a CD Package. These are the Full Version (SM01-391) or the Full Version with Lockshop Enhancement (SM01-392). The program can be installed using the CD package or from a Demonstration Version that you can download from the Matrix Security website. In either case, the software is the demonstration version until you type in the Serial Number (Registration Number), register your software with Matrix Security, and by typing in your activation key that you receive from Matrix Security after registration.

Updates – These are free releases that may add new features and/or fix bugs. We recommend that customers update their software to the most current version. Your current SITEMASTER 200® version number is displayed in the very top of the program's screen.

Upgrades – We provide a number of upgrades depending upon your needs. For example, there is an upgrade from the Full Version to the Full Version with Lockshop Enhancement. Upgrades are sold directly by Matrix Security. Go to our website's Products page and click the Order from Matrix Security link to see our current upgrades.
