

Auto-Updater ver. 3.16

The IT Group can download the most recent Sitemaster 200® Upgrade and place it at a central location on the Server. On each workstation, the path of the server location is selected. When users run the program it automatically checks for an updated file. If found, the update is installed.

1. On the server, create a new folder that will contain the SITEMASTER 200® update file.
2. Download the update from Matrix Security (www.matrixsecurity.com/Downloads.htm). Note: The Update file must be a higher version than 3.16.
3. On the workstation, run Sitemaster 200® and click on the Utilities menu.
4. Click on the Maintenance Utilities item and select, Select Upgrade Location.
5. On the Select Upgrade Location window, locate the folder that you created on the server.
- 6 Click OK.
