

## Setting Up SITEMASTER 200® to Run with Vista

Note: When installing the program make sure User Access Control is turned off. You may turn it on after a successful installation.

After you install SITEMASTER 200® on the Vista operating system, you may encounter a problem when you try to run the program. If so, do the following:

Navigate to the following location on your hard drive: Computer/C:/Program Files/Ingersoll-Rand/SITEMASTER 200® v.3.0

For SiteMaster version 3.16 or greater:

1. Open the SITEMASTER 200® v.3.0 folder and locate the SM200316.exe or greater file (i.e., SM2003161.exe) and not the SM20030.exe file.
2. Right-click on the SM200316.exe or greater file and select Properties.
3. Click on the Compatibility tab.
4. Under Privilege Level, select the Run this program as an administrator check box and then click OK.

For SiteMaster version 3.15 or lower:

1. Open the SITEMASTER 200® v.3.0 folder and locate the SM20030.exe file.
2. Right-click on the SM20030.exe file and select Properties.
3. Click on the Compatibility tab.
4. Under Privilege Level, select the Run this program as an administrator check box and then click OK.
