

Revision 8/14/2008 - INSTALLING SITEMASTER 200® v3.0 FREE UPDATES

1. Starting with version 3.16 there are two new executable files provided with the update; sm20030.exe and sm200316.exe.
2. The sm20030.exe file replaces the existing sm20030.exe file located in the SITEMASTER 200® v3.0 Folder on the workstation's hard drive. The purpose of this replacement file is to enable the Auto-Update Feature, and future updates will only work with this new executable file.
3. The sm200316.exe is the new version update file that can only work with the new sm20030.exe file. This file is added manually to the SITEMASTER 200® v3.0 Folder. Now, future versions can take advantage of the Auto-Update Feature.

*We will not use the Auto-Update Feature* - After downloading a free new version update (e.g., v.3.17) and extracting the files, manually add the two new executables files to the SITEMASTER 200® v3.0 Folder on the hard drive.

*We will use the Auto-Update Feature* - After downloading a free new version update (e.g., v.3.17) and extracting the files, manually add the new version file (e.g., sm200317.exe) to the update folder (e.g., SM200 Update) that you added on the server or local workstation. You don't need to add the SM20030.exe file to the update folder because it's not used with the feature.
